

CerazirPoint

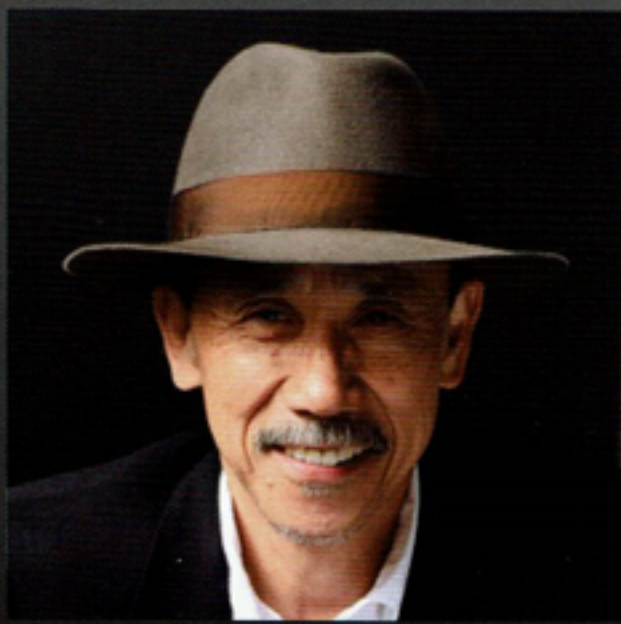

CerazirPoint

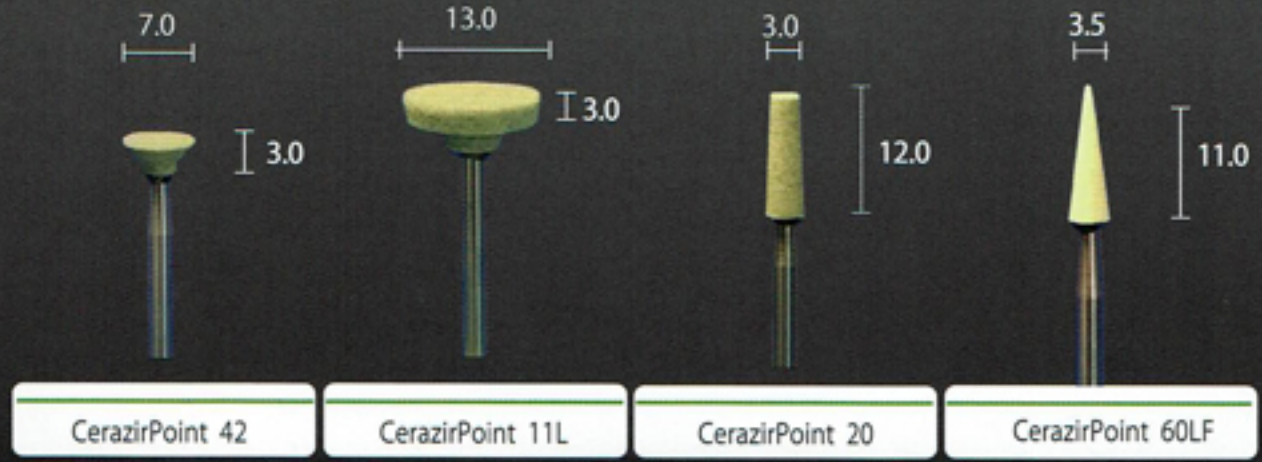

**KATAOKA**

Select

# KATAOKA Select MRP ¥12,400

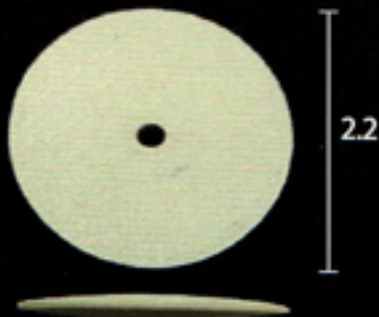

I am convinced the CerazirPoint is the extraordinary cutting material. It is excellent in scraping and very long lasting. On my own use of it, I asked the manufacturer to create the CerazirPoint lineup with the best shape with which I can precisely adjust zirconia or e.max material. The CerazirPoint is not a tool not only for adjusting zirconia or e.max material. You can also get smoother surface by using it on morphological modification of ceramics which were built up and fired. And you can find the finish is different from the one by using a carborundum point or a diamond point.

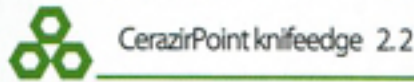

" Shigeo Kataoka Ceramic training center in Osaka "
